Our Computing Subject Leader

My Name is Miss Hinawski I am the Computing Subject Leader.

My passion / personal experience with my subject

What do you love about this subject, and what is your history with it?
My passion for Computing comes from a love of technology, and being able to use technology to enhance the classroom and learning experience. Keeping up to date with the latest educational technological developments ensures our curriculum is relevant, meaningful and prepares our children for the future of an ever-changing digital world.

Experiences in Our School

What has happened recently in this subject? What do you do weekly / termly?

Making cross-curricular links with other subjects within school provides our children with the opportunity to practise and develop their computing skills in a contextual manner. We often use our computing skills across subjects by carrying out research, creating graphs, tables and spreadsheets, publishing our writing on blogs and even sometimes producing amazing pieces of artwork!

Hopes and Goals in my subject

What are you hoping to do this year?

This year we will be looking at making strong cross-curricular links with our PSHE curriculum and My Happy Mind to promote the importance of online safety. I am really looking forward to ensuring all children have high quality lessons and experiences, using the Teach Computing scheme of work, allowing them to make real-world connections with their learning.
